

Glass Pictures with Watercolour

v11796

Aqua Pigment Watercolour dripped onto Imitation Rice Paper with a pipette. Use scrunched up tin foil as an underlay so that the paper does not stick and ensuring that the colour can flow freely on the paper. The paper is glued onto a glass plate. The design on the front of the glass plate is drawn with a permanent marker. Finally, the artwork is glued onto a wooden holder.

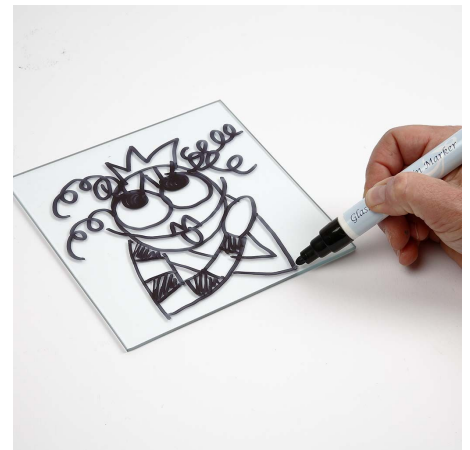

Comment faire

1 Scrunch up the piece of tin foil as shown.

2 Put Imitation Rice Paper on top of the tin foil which ensures that the paper does not stick to the underlay. Alternate drops of Aqua Pigment and water with a pipette onto the paper. Let it dry.

3 Cut the paper to fit the size of the glass plate and glue with Decoupage Lacquer for Glass.

4 Draw the design on the front of the glass with a black Glass & Porcelain Marker. Insert the piece of glass art in the wooden holder (which you may paint with Plus Color beforehand).
