

How to empty an Egg using an Egg Blower

v14365

This Egg Blower is an easy and hygienic shortcut to emptying the eggs' yolks and whites. Here we show how the tool is used.

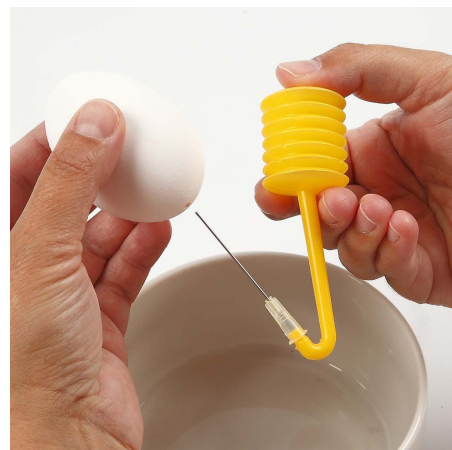

Comment faire

1 Use the push pin which is part of the tool, to carefully prick a hole in either end of the egg.

2 Attach the needle in the transparent tube to the end of the yellow pump. Remove the tube.

3 Push the needle into the hole in the egg.

4 Blow air into the egg by pushing the pump several times. This action makes the contents of the egg come out.

5 Rinse the egg by pouring water into the hole. Insert the needle into the hole and pump, emptying the egg.
