

Un squelette de dinosaure recouvert de pâte Silk Clay

v14447

Ces squelettes de dinosaures en bois à assembler sont recouverts de pâte Silk Clay. Des yeux en plastique munis de fils sont ensuite poussés sur la tête.

Comment faire

1 Assemble the skeleton using the instructions on the packaging.

2 Roll Silk Clay in your chosen colour out flat, in order to cover a large area of the dinosaur at a time.

3 Place several flat pieces of Silk Clay onto the skeleton, covering it completely. Smooth out at the joints.

4 Make a red tongue and white teeth from Silk Clay. Push an eye onto each side of the head. Leave to dry.

5 A TIP: Make fact sheets about the individual dinosaur. Write text with a white Uni Posca marker on black card. Glue on a printed photo of the species. Use the internet.
