

Un renne dont le corps est un cône recouvert de Foam Clay

v14419

Ce renne assis est en polystyrène, recouvert de Foam Clay marron, mélangée avec du rouge, vert et noir. Les yeux et le nez sont en Silk Clay. Les bois du renne et des branches en fil chenille sont ajoutées.

Comment faire

1 Mix equal amounts of green, red & black Foam Clay to make brown.

2 Press Foam Clay onto the cone body evenly distributed. A TIP: By rolling out Foam Clay flat, a large area can be covered at a time.

3 Cut pieces of pipe cleaner and assemble to make antlers (a small piece across a large piece x 2). Push both onto the head. Make arms and legs from pipe cleaners and push them onto the body.

4 Roll small balls of white and black Silk Clay for eyes and red for the nose. Press all parts onto the head.
