

Un arbre de Noël d'argile blanche à l'intérieur d'une boule de verre

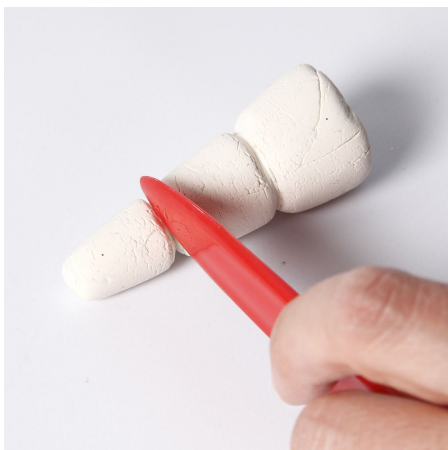

v14665

Un arbre de Noël fait d'argile blanche est suspendu à l'intérieur de chacune de ces boules pendantes sans fond en verre rond. La corde est décorée de perles de bois et d'une petite étoile en métal.

Comment faire

1 Christmas tree: Model a small 6 cm tall cone from a lump of clay.

2 Use a knife or similar and make a groove in two places all the way around the cone.

3 Decorate with a pattern. We have used dots made with the end of a brush handle. (A TIP: Smooth with water if you want a smooth and even surface).

4 Model a U from florist wire and insert it into the top of the cone as a loop for hanging. Leave the finished tree to dry for approx. 24 hours.

5 Assemble the hanging decoration. Cut a piece of natural hemp and tie it to the loop and decorate with a wooden bead.

6 Thread the baseless hanging glass bauble onto the piece of natural hemp with the Christmas tree and finish with a wooden bead and a metal star. Tie at the top with a double knot.
